

WEST seminar and training on 22-25 October 2012 in China

The first day of WEST seminar

On 22 October 2012, DHI WEST 2012 Seminar and software training course started successfully in Ray font Shanghai Xuhui Hotel in Shanghai in China. The course, which was scheduled for three days attracted 18 trainees. The first day seminar started with DHI China vice chief engineer Dr. Weimin Geng's salutatory. Participants, who mainly came from research institutions, universities and industries in mainland China as well as Hong Kong, gave presentations about "Integrated simulation of urban water system", "Optimal design of simulation-based wastewater treatment plant process", "The application of simulation in the upgrading of the wastewater treatment plant", "Modelling technology application in wastewater treatment plant process control" and share experiences together.

The first day of WEST training

On 23 October 2012, DHI WEST 2012 software training course started successfully. This training course was given by Dr. Dong Shanyan and Enrico Ullisse Remigi, who are both senior engineers with extended working experience. During the training, people from scientific research institutions and universities, learned about the 2012 version of WEST and had a great chance to exchange experiences with fellow WEST users.

The third day of WEST training

The three-day WEST training came to a happy ending on 25 October. The trainees learned a lot during the training course and communicated very well. We believe that they have all gained much more than just software skills about version 2012 of WEST. The trainees were happy about this training opportunity and took photos together for memorising this period in Shanghai. Last but not least, at DHI China we would like to express our great appreciation to all participants for their support to the staff. If you have any problems using the software or have any ideas and advice for improvements, please tell us at any time at sos-cn@dhigroup.com.
